📍 Padua

I'm a software developer and I have gained good experience in finance and business. I have a strong interest in developing backend services and solving problems related to them. I mainly have experience with Java development and Scala. Recently, I got interested in microservices and integration technologies such as Kafka and gRPC and I would like to apply this knowledge into practice by dealing with system integrations.

WORK EXPERIENCE

Java developer

H-Farm S.p.a. Italy | 2017 - Present

Consultant for R&D unit of multinational client operating in Fintech. Responsible for the implementation of financial product catalogue module and financial position portfolio module, part of the company's front banking software offering. I have matured the skills to maintain product software and backward compatibility and to work within a team.

- Java
- Bndtools
- OSGi
- WebSphere
- Tomcat
- Jenkins
- EclipseLink
- Liquibase
- PostgreSQL
- OracleDB

Consultant for a customer representing a medium-small company in which I had to develop and maintain a license management portal done with JHipster.

- Java
- Spring
- Hibernate
- Liquibase
- PostgreSQL
- TypeScript
- React

Java developer

Nextep S.r.l. Italy | 2016 - 2017

Realization and maintain of backend applications, realized in Scala and Java with the use of Play Framework.

- Scala
- Play Framework
- Java
- Spring
- MongoDB

UNIVERSITY PROJECTS

Software engineering

University Of Padua | Nov 2014 - May 2015

Realization of an android-based smartwatch application and a spring-based cloud application. In this project I followed each part of analysis, design, development and testing following the incremental model methodology. I also had to take care of the planning of all the activities of the team due to the constraint of the duration of the project. I developed the ability to write well-defined requirements that reflect the client's needs and also design the general and detailed architecture.

- Incremental Model Methodology
- UML Diagrams
- Java
- Android
- HTML5
- CSS
- MySQL and SQLite
- Spring Framework

Databases

University Of Padua | Sep 2014

Development of a database and related web interface to interact with it. A particular emphasis has been placed on modeling a database of a complex reality in order to familiarize with all types of relationships between data, constraints and especially complex queries.

- SQL
- ER modeling
- MySQL
- PHP

Web technologies

University Of Padua | Jun 2014

Development of a website, the main focus was to use the most important web technologies to create a website that complies with usability and accessibility standards. The site provides dynamic pages generated with a backend written in Perl, the information is stored in XML format according to a schema defined in XMLS, XPath was used to query these files.

- HTML4
- CSS
- WCAG
- Perl
- XML, XMLS, XSLT and XPath

EDUCATION

Bachelor degree in Computer Science

University of Padua

Oct 2011 - Apr 2016
