EXPERIENCE

Software Engineer

2021 – Present

Lunatech, The Netherlands

Developed a data processing platform that leverages microservices and APIs to expose various data from Audi vehicles and includes a GDPR consent engine to manage drivers' privacy preferences. Applied best practices for CI/CD, application containerization, and deployment, as well as managed cluster configuration using Helm and Kustomize. Possess a strong understanding of OAuth2 and JWT technologies with Forgerock. Maintained a team-wide library containing common system functionalities. Implemented an API management system featuring sandbox/business functionalities and a cost calculator for business plans. Placed a strong emphasis on system monitoring using Jaeger, Prometheus with Grafana, and Kibana. Provided automated API documentation using Swagger, generated from Scala code and Scala doc. Designed database schemas in Cassandra with a focus on performance and data integrity. Primarily coded in Scala with an emphasis on effective functional programming to ensure clean, readable, and maintainable code.

- Mastered how to manage and design a microservice system in Kubernetes
- Improved observability of the system with Prometheus and Grafana
- Mastered how to design a non blocking reactive application

Stack: Scala, Java, Rust, Kafka, Cassandra, PostgreSQL, Akka/Pekko, Kubernetes, Docker, Helm, Kustomize, Terraform, OpenTofu, Prometheus, Grafana.

Java Developer, Consultant

2017 – 2021

H-Farm S.p.A., Italy

Consultant embedded in the R&D unit of a multinational fintech client, on the front banking product line, plus a second engagement for a small enterprise customer.

- Implemented the financial product catalogue and the financial position portfolio modules of the client's front banking suite, working inside an OSGi codebase where backward compatibility across released versions was a hard constraint.
- Built and maintained a license management portal for an enterprise customer, from the JHipster baseline through to the React front end and the schema migrations behind it.

Stack: Java, OSGi, bnd, WebSphere, Tomcat, EclipseLink, Hibernate, Spring, Liquibase, PostgreSQL, Oracle Database, Jenkins, TypeScript, React.

Backend Developer

2016 – 2017

Nextep S.r.l., Italy

First professional role, on a small team building and maintaining backend services.

- Developed and maintained backend applications in Scala and Java on Play Framework and Spring, backed by MongoDB.

Stack: Scala, Play Framework, Java, Spring, MongoDB.

SKILLS	Languages	Java, Scala, TypeScript, SQL, Rust
	Backend	Akka, Pekko, Spring, Play Framework, JPA and Hibernate
	Data	PostgreSQL, Oracle Database, MongoDB, Liquibase
	Platform	Docker, Kubernetes, Terraform, OpenTofu, GitHub Actions, AWS

EDUCATION

BSc in Computer Science

2011 – 2016

University of Padua

LANGUAGES

Italian (native)

English (professional)
